

As per DGMS Guidelines, it is advised to carry out Short encapsulation pull testing of every batch of resin capsule. (Ref: DGMS/S&T/Tech Cir (approval) No 10 of 13th July 2009 & DGMS/S&T/Tech. Cir (Approval) No. -03 of 22th September 2010)

Short encapsulation pull testing is essentially to verify rock-bolt system performance.

Micon supplies all the equipment needed to undertake short encapsulation pull testing on site in mining and tunneling environments.

- Calibrated hollow ram, hand pump and pressure gauge
- Face plate, bearing nut & pull bar
- Monopod and dial gauge
- Steel carrying case
